## QUICK WORK

**Background:** It is late on Sunday night. You've had a great weekend, but failed to finish your science lab at home. You set up the simple experiment and run two trials and each takes you about 7 minutes. You are supposed to complete a minimum of 10 trials and record the data in your notebook to complete the analysis in class tomorrow. You are tired. It sure would be easy to fake the rest of the data.

**The Actors:** You

**Stop!** Are my emotions in control? Do I have a dilemma? (Describe the problem.)

**Think!**

What are my choices?	What character traits would be demonstrated?	How does the Golden Rule apply?
1.		
2.		
3.		
4.		

**Act!** What character traits do I choose to demonstrate? What choice will I make?

What supporting character traits or skills will I need to act on my choice? Do I need to ask for help?
