THE REACH STANDARDS

RELATIONSHIPS
Students know about the types of relationships with adults and peers that can help them grow and thrive and also know how to strengthen those developmental relationships in their lives.

EFFORT
Students believe that with effort, use of good learning strategies, and a willingness to learn from failure and mistakes, they can become smarter and more successful in school.

ASPIRATIONS
Students have positive visions of what they want their lives to be like in the future and understand that what they do (or do not do) in the present will influence their ability to realize that vision of their possible selves.

COGNITION
Students can use metacognition (thinking about their own thinking) to manage learning, develop mental toughness, and practice self-control.

HEART
Students know and are known for what they love to do (their sparks) and their most important values.
